

**Vigtigt:** Stillen ist das Beste für Säuglinge.

Im Zubereiten von Milchnahrung oder Tee stellt die Vorgaben des Anwendungs- und längeres Saugen von Flüssigkeiten verursacht

schädiges. Zu einer Schädigung der Zahnschäfte kann es bei Kleinkindern

auftreten. • Immer die Temperatur des Nahrungsmittels vor dem Füttern

überprüfen. • Wenn Sie das Produkt bei ersten Anzeichen von

Wiederholungen oder Mängeln sofort weg. • Alle nicht verwendeten

Teile müssen außerhalb der Reichweite von Kindern aufbewahrt werden.

• Bringen Sie niemals Schnüre, Binder, Schnürsenkel oder

Teile von Kleidungsstücken an das Produkt an. Strangulationsgefahr!

Dieses Produkt darf nur unter Aufsicht von Erwachsenen verwendet

werden. • Ernährungssauger dürfen niemals als Schnüller verwendet

werden. • Glassflaschen können zerbrechen.

**Anwendungshinweise:**

Für Ersterhaltung Produkt in Einzelteile zerlegen, diese reinigen und

über 5 min in kochendes Wasser geben. Dies dient der Hygiene. Vor

dem weiteren Gebrauch sorgfältig reinigen zur Sicherstellung der

Hygiene. Bei Bedarf sterilisieren. Trocken und hygienisch aufbewahren.

Zum Reinigen den NUK Spülreiniger oder ein mildes Handspülmittel

verwenden und auch verborgene Bereiche von Nahrungsmitteln

reinigen. Gründlich ausspülen. Sauger und Flaschen gehören

zu Materialschäden – es kann zu Materialschäden führen.

Zum Spülmaschinenreiniger kommen. Manche Nahrungsmittel können

Materialien verfärben (z.B. Kratzen) oder geruchlich beeinflussen

(z.B. Fenchelöl). Die Gebrauchsfähigkeit nicht einschränkt. Ist

die Flasche von innen beschädigt (z. B. durch Kratzen), sollte sie aus

hygienischen Gründen ausgetauscht werden.

**Zum Auskochen oder Vaporisieren:** Die Flasche stets in Einzelteile

zerlegen und geöffnet lassen, da es sonst zu Verformungen kommen

kann. Zum Vaporisieren empfehlen wir den NUK Dampf-Stillsterilisator

oder NUK Mikrowellen-Dampf-Vaporisator. Zur Vermeidung von

Materialschäden stets die Gebrauchsanweisung des Vaporisators

beachten. Bei der Desinfektion von Kunststoffflaschen die zulässige

Höchsttemperatur von 100°C (Hinweis auf Flasche) nicht überschreiten!

Polyamidflaschen (mit „PA“ gekennzeichnet) nie in der Mikrowelle

wärmern. Gefahr von Materialschäden!

Den Ernährungssauger oder die Flasche nicht direkt Sonnenlicht oder

Wärme aussetzen oder länger als angegeben in Desinfektionsmittel

(Sterilisationslösung) belassen, da dies die Saugfestigkeit verringert

oder das Material beschädigen kann.

**Für Ernährungssauger:** Vor jedem Gebrauch den Ernährungssauger

überprüfen und in alle Richtungen ziehen. Bei ersten Anzeichen von

Schäden oder Schwachstellen wegwerfen. Prüfen Sie vor jedem

Gebrauch das Belüftungsventil und die Trinköffnung durch leichtes

Auseinanderziehen auf Durchgängigkeit. Nicht in Medizin laugen!

Sauger aus hygienischen und Sicherheitsgründen alle 1 bis 2 Monate

austauschen. Für LATEX-Sauger: Hergestellt aus Naturkautschukfalte.

Für Glasflaschen: Zum Umröhren in der Flasche keine Metall-Löffel

benutzen – hierdurch können Haarsplitter entstehen. Es ist später zum

Bruh führen. Wenden Sie beim Auf-/Zuschrauben der Flaschenhälften

Gewalt an. Flasche bei geringsten Anzeichen von Beschädigungen wie

Rissen usw. austauschen.

Flaschen stets geöffnet erwärmen (Explosiongefahr) und abkühlen (Verformungen)! Bei Erhitzung im Mikrowellenofen ist besondere

Vorsicht geotet; es kann zu örtlicher Überhitzung kommen. Erhitze

Nahrungsmittel sind immer umzurühren, und die Temperatur ist vor

dem Füttern zu überprüfen.

**Bitte Produktinformation und Artikel-/ LOT-Nr. zur späteren**

Verwendung aufheben. EN 14350.

MAPA GmbH, Industriestraße 21-25, 27404 Zeven, Germany, www.nuk.de

**Important: Breastfeeding is best for babies.**

When preparing feed or teas, always follow the instructions of the

manufacturer. To retain vitamins and nutrients, the temperature should

not exceed 60°C. Only administer food and drink in the quantity and

at the time recommended by the manufacturer. From 5 months

onwards, breastfeed until the baby is weaned.

**Instructions:**

Before first use, disassemble and clean the product and then place

components in boiling water for 5 min. This is to ensure hygiene.

• Always use this product with adult supervision. • Never use feeding ts

as a soother. • Glass containers may break.

**Instructions:**

Before first use, disassemble and clean the product and then place

components in boiling water for 5 min. This is to ensure hygiene.

• Always use this product with adult supervision. Sterilise as need

Store under dry, hygienic conditions.

**For cleaning use the NUK bottle cleanser or a mild washing-up liquid**

to remove any food residues also from hidden surfaces. Soak the prod

if necessary, don't scratch the bottle. Rinse thoroughly. Teats and bot

should not be cleaned in a dishwasher – dishwashing detergents can ca

a material damage! Certain foodstuffs (carrot juice etc.) may discolor

material or affect its colour (juice etc.). This has no effect on the fit

for use or safety of the product. If the teat is damaged from the ins

(scratches etc.), it should be replaced for hygiene reasons.

**For boiling or steam sterilising,** always dismantle the product into

components and leave it open to avoid damage. For sterilisation

I recommend the NUK Steam Steriliser - or NUK Microwave Steam Steril

Carefully follow the instructions for the steriliser to ensure perform

When sterilising plastic bottles, please be aware of the 100°C maxim

temperature limit (see symbol on bottle). Never put polyamide bott

(marked with "PA") in a microwave oven - risk of material damage!

Do not leave the feeding teat or bottle in direct sunlight or heat, or leave

disinfectant solution" for longer than recommended, as this n

weaken the teat or damage the material.

**For boiling or steam sterilising,** always dismantle the product into

components and leave it open to avoid damage. For sterilisation
